# Manulife Investment Greater China Fund

## Fund category

Equity

## Fund objective

To provide Unit Holders with capital growth over the medium- to long-term by investing in larger capitalised companies in the Greater China region namely China, Hong Kong and Taiwan markets, as well as China-based companies listed on approved overseas markets*.
*Foreign markets must be under the rules of an Eligible Market

## Investor profile

The Fund is suitable for investors who seek capital appreciation over the medium- to long-term, willing to accept higher level of risk and have a medium- to long-term investment horizon.

## Fund manager

Manulife Investment Management (Hong Kong) Limited

## Trustee

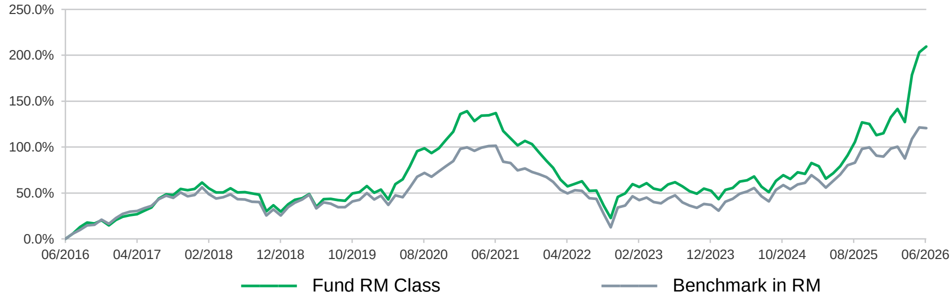
HSBC (Malaysia) Trustee Berhad
193701000084 (1281-T)

## Fund information (as at 30 Jun 2026)

| | |
|---|---|
| NAV/unit | RM 0.7454 |
| Fund size | RM 715.94 mil |
| Units in circulation | 960.54 mil |
| Fund launch date | 21 Oct 2008 |
| Fund inception date | 11 Nov 2008 |
| Financial year | 31 Aug |
| Currency | RM |
| Management fee | Up to 1.75% of NAV p.a. |
| Trustee fee | Up to 0.06% of NAV p.a. excluding foreign custodian fees and charges |
| Sales charge | Up to 6.00% of NAV per unit |
| Redemption charge | Nil |
| Distribution frequency | Incidental, if any |
| Benchmark | MSCI Golden Dragon Index |

## Fund performance

10-year performance as at 30 June 2026*



## Total return over the following periods ended 30 June 2026*

| | 1 month | 6 month | YTD | 1 year | 3 year | 5 year | 10 year |

## Market review

China equities pulled back with diverging performance between onshore and offshore markets. Market expectations towards AI-related investment themes stayed strong, supported by continued industrial upgrading and strong export growth. The government's push to accelerate AI development, including plans for large-scale AI infrastructure investment and support for advanced manufacturing, semiconductors, robotics and digital industries, remained a key pillar underpinning market leadership. On the macro front, Chinese Mainland reported strong export growth of 19% y/y in May 2026, driven by strong technology and industrial exports. Chinese Mainland's PPI grew by 4.1% y/y in June 2026, continuing the positive trajectory since March 2026.

For China A-shares, technology led gains as investors continued to favor AI infrastructure beneficiaries, including semiconductor, tech hardware and related supply-chain names. On the other hand, utilities, energy and real estate lagged amid softer domestic economic conditions and profit taking.

Hong Kong equities declined during the month due to profit taking and sector rotations away from non-AI sectors amid a less supportive global liquidity backdrop. Market performance became increasingly concentrated in AI-related exposure, while consumer discretionary, utilities and real estate underperformed. On the economic front, Hong Kong's exports remained robust (+41% YoY in May), driven by electronics shipments and re-export demand, while retail sales growth moderated (9% YoY in April) following a stronger first quarter and softer holiday-related spending.

Taiwan equities posted modest gains, supported by resilient technology fundamentals and continued strength in exports. Export growth remained exceptionally strong (+52% YoY in May), broadening beyond technology into non-tech segments, while industrial production (+12% in May) continued to be supported by semiconductor and electronics demand. On the policy front, the central bank kept policy rates unchanged, maintaining a cautious stance despite stronger growth and inflationary pressures.

## Market outlook

We maintain a positive view on Greater China equity markets for the following reasons:

**1) Chinese Mainland's pro-growth stance on technology and industrial upgrades:**

The Chinese Mainland economy continues to recover, supported by resilient export growth driven by advanced manufacturing upgrades and strengthening global demand for technology products. The growing contribution of renewable energy within the domestic power generation mix also helps reduce vulnerability to external oil price shocks.

**2) Improving producer price index:**

The Chinese Mainland's Producer Price Index (PPI) turned positive in March 2026, reversing the negative trend that persisted since 2022. Supported by anti-involution policies and improving commodity prices, we believe the backdrop is becoming increasingly constructive for corporate earnings and reflation.

**3) Increased investment in AI and the domestic technology ecosystem:**

There is no shortage of home-grown innovation, ranging from AI foundation models and semiconductors to humanoid robotics and industrial automation. Significant government and corporate investments are driving the build-out of data centers, computing infrastructure and semiconductor capabilities. We remain constructive on opportunities across AI models, semiconductor equipment, AI infrastructure, networking, optical components, thermal cooling and power equipment supply chains.

**4) Beneficiary of the global energy transition and power infrastructure upgrade cycle:**

The Chinese Mainland stands to benefit from both domestic demand under the 15th Five-Year Plan and the global power infrastructure replacement cycle. Ambitious renewable energy, nuclear power and pumped hydro development targets are expected to support long-term investment opportunities. Aging grid infrastructure in the US and Europe, coupled with rising electricity demand from AI and data centers, should drive sustained demand for Chinese Mainland power and grid equipment manufacturers.

**5) Improving earnings outlook for China and Hong Kong markets:**

The offshore China equity market has been supported by upward earnings revisions in sectors such as materials, healthcare and financials, alongside a vibrant Hong Kong IPO market and steady southbound inflows. Hong Kong's property market has also improved meaningfully in 2026. Meanwhile, signs of stabilization in the Chinese Mainland property market, particularly in Tier-1 cities, are encouraging for broader economic activity.

We continue to see attractive investment opportunities across technology, industrials, power equipment, materials and healthcare sectors.

For the Taiwan region, we remain constructive on the structural growth opportunities driven by AI and high-performance computing. We favor the advanced-node foundry and OSAT supply chains, copper-clad laminates, co-packaged optics (CPO), thermal cooling solutions and power management providers that are positioned to benefit from rising AI infrastructure investment and next-generation data center upgrades.

## Fund review and strategy

The Fund posted marginal losses but outperformed the benchmark. The portfolio's underweight to consumer discretionary and overweight to IT contributed to performance, while underweight to financials offset part of the gains. Stock selection in industrials and IT contributed to performance, while consumer discretionary offset part of the gains.

Contributing to performance was a Chinese electronic material manufacturer. The company continues to benefit from favorable supply-demand dynamic in its key product (used in printed circuit boards' production), which should drive higher average selling price and gross margin. Demand is backed by AI-driven upcycle and recovering traditional electronics demand, while supply is limited with industry constraints. The company's vertical integration in copper foil and glass fiber helps mitigate upstream cost pressures, supporting further potential margin improvement into 2026.

Another contributor was a Chinese advanced materials company. The stock rallied on the back of rising expectations over AI-focused electronic materials opportunities. The company specializes in critical ceramic-based materials used in structural growth areas, e.g. AI infrastructure, electronics, communications equipment, and automotive systems.

Detracting from performance was a Taiwanese electronic component manufacturer. The stock was weighed by softer 2Q26 revenue due to component supply constraints and concerns over potential delays in 800V HVDC adoption. Despite near-term revenue softness, investors remained constructive on its dominant position in AI data-center power infrastructure, particularly in server power supplies, liquid cooling solutions, and next-generation HVDC architectures.

Another detractor was a Hong Kong-listed electronic connectivity solution provider, which pulled back on profit-taking. The company remains supported by the growing exposure to AI servers, cloud data centers, high-speed connectivity, and optical interconnect solutions, which are becoming increasingly important revenue drivers.

# Manulife Investment Greater China Fund

Based on the Fund's portfolio returns as at 31 May 2026 the Volatility Factor (VF) for the Fund is as indicated in the table above and are classified as in the table (source: Lipper). "Very High" includes Funds with VF that are above 16.460, "High" includes Funds with VF that are above 11.955 but not more than 16.460, "Moderate" includes Funds with VF that are above 8.735 but not more than 11.955, "Low" includes Funds with VF that are above 4.705 but not more than 8.735 and "Very Low" includes Funds with VF that are above 0.000 but not more than 4.705 (source:FiMM). The VF means there is a possibility for the Funds in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified Funds. VF and VC are subject to monthly revision or at any interval which may be prescribed by FIMM from time to time. The Fund's portfolio may have changed since this date and there is no guarantee that the Funds will continue to have the same VF or VC in the future. Presently, only Funds launched in the market for at least 36 months will display the VF and its VC.
