Factsheet

Manulife PRS-Growth Fund

Fund category
Core (Growth)

Fund objective
The Fund aims to facilitate accumulation of retirement savings^ by providing capital growth over the long term.

Investment Strategy
To achieve the investment objective of the Fund, the Fund may invest a maximum of 95% of its NAV in equities, equity-related securities and/or REITs (via CIS). The Fund will invest at least 5% of the Fund's NAV in fixed income instruments such as bonds, money market instruments and deposits with financial institutions.

Fund manager
Manulife Investment Management (Hong Kong) Limited

Trustee
HSBC (Malaysia) Trustee Berhad
193701000084 (1281-T)

Fund information (as at 30 Jun 2026)

NAV/unit (Class A)	RM 0.6853
NAV/unit (Class C)	RM 0.7362
Fund size	RM 77.62 mil
Units in circulation	106.70 mil
Fund launch date	Class A: 19 Nov 2012 Class C: 28 Apr 2016
Fund inception date	20 Nov 2012
Financial year	31 Aug
Currency	RM
Management fee	Class A: 1.80% p.a. of the NAV Class C: 1.50% p.a. of the NAV
Trustee fee	Class A & C: 0.04% p.a. of the NAV
Sales charge	Class A: Nil Class C: Up to 3.00% of the NAV per unit
Redemption charge	Class A: 3.00% of NAV per unit for withdrawal in the 2nd year; 2.00% of NAV per unit for withdrawal in the 3rd year; 1.00% of NAV per unit for withdrawal in the 4th year; No Redemption Charge from the 5th year onwards. Class C: Nil
Distribution frequency	Incidental, if any, and will be automatically reinvested and distributed as additional units of the Fund.
Benchmark	Median return of all non Shariah-compliant PRS core funds - growth funds established in Malaysia.

Fees by Private Pension Administrator (PPA)

Account opening fee	RM10.00 (one-off)
Annual fee[1]	RM8.00 p.a.
Pre-retirement withdrawal fee	RM25.00 for each withdrawal
Transfer fee	RM25.00 for each transfer to another PRS provider
Administration fee	0.04% p.a. of the NAV

Factsheet
Manulife PRS-Growth Fund

Market review

Global markets softened in June as investors navigated a more uncertain macro backdrop following the strong recovery seen in previous months. Sentiment was influenced by ongoing geopolitical developments, evolving expectations for central bank policy, and mixed economic data across major economies. Global equities posted modest declines, with developed markets (DMs) proving more resilient than emerging markets (EMs), while market leadership remained concentrated in a narrow set of sectors and themes. Fixed income markets delivered mixed returns as government bond yields edged higher, weighing on sovereign bonds, while credit markets proved resilient. Commodity markets were generally weaker over the month, with both energy and industrial metals posting declines. Oil prices softened amid easing supply concerns and moderating demand expectations, while base metals retreated as investors reassessed the outlook for global growth following a period of stronger performance earlier in the year.

US equities declined modestly in June as investors reassessed the outlook for interest rates following resilient economic and inflation data. Strong labor market conditions and broadly stable economic activity continued to support the soft-landing narrative, though sticky inflation reinforced expectations that the US Federal Reserve Board (Fed) would remain patient on policy easing. While enthusiasm around artificial intelligence (AI)-related investment remained supportive for selected technology and semiconductor names, broader market participation weakened. Defensive sectors, particularly healthcare, advanced, whereas communication services and energy lagged. Treasury yields edged higher during the month, reflecting continued uncertainty around the timing and magnitude of future US Fed rate cuts.

European equities were resilient, posting positive returns despite a challenging global backdrop. The region benefited from easing energy-related concerns and a more stable political environment following recent volatility earlier in the year, supporting investor sentiment. Financials and industrials led gains, aided by resilient economic activity and expectations for continued fiscal spending, while energy weighed on returns amid weaker oil prices. However, growth expectations remained subdued as manufacturing activity continued to show signs of weakness. UK equities trailed the broader European market, reflecting their greater exposure to commodity-related sectors.

Asian equity markets weakened over the month, with EM and Asia Pacific ex-Japan trailing DM peers. Performance remained closely tied to the technology and semiconductor cycle, although investors became more selective following strong gains earlier in the year. Korea and Taiwan continued to benefit from AI-driven demand and semiconductor-related strength, while Chinese Mainland and Hong Kong were weighed down by persistent concerns over domestic demand, the property sector, and a lack of stronger policy stimulus. Meanwhile, Japan was relatively resilient, supported by corporate reform initiatives and a weaker Japanese yen (JPY), although gains were tempered by profit-taking in technology-related sectors.

Global equity markets posted modest losses in June, with the MSCI World Index declining 0.69%. EM fell 1.37%, while Asia Pacific ex-Japan returned -1.44%. Within DM, Europe performed well, delivering a gain of 0.78%. Japan declined modestly by 0.38%, while the US and Canada retreated, with Standard & Poor's (S&P) 500 returning -0.95% and Canadian equities falling 1.78%.

At the sector level, healthcare notably performed within the MSCI World Index, advancing 5.03%. Financials and industrials also generated solid gains of 3.56% and 2.74%, respectively. In contrast, communication services and energy lagged, declining 7.95% and 6.08%, respectively.

Fixed income markets delivered mixed results over the month. US Treasury yields moved slightly higher, with the 10-year Treasury yield ending June at 4.44%. Global government bonds declined, with the FTSE World Government Bond Index returning -0.75%. Global investment-grade (IG) credit also posted negative returns of -0.43%, while riskier segments proved more resilient, as global high-yield (HY) bonds gained 0.20% and EM debt advanced 0.56%.

In foreign exchange markets, most major currencies weakened against the US dollar (USD), including the JPY (-2.0), euro (EUR) (-2.0) and British pound (GBP) (-1.4%).

Market outlook

We expect a more uncertain macro and policy backdrop, albeit with improving growth as 2026 progresses. Following a strong 2025, gradually easier monetary policy, targeted fiscal support, and businesses adapting to new trade and policy regimes should continue to support economic activity. However, inflation remains elevated while labor market conditions have remained resilient, complicating the US Fed's assessment and reducing the urgency for policy easing. Coupled with a new US Fed Chair and ongoing policy uncertainty under the second Trump administration, market volatility is likely to persist. Our base case remains constructive, with inflation gradually moderating toward target and growth remaining resilient. Nevertheless, geopolitical developments, particularly in the Middle East, alongside questions around the sustainability of AI-driven earnings growth, could keep uncertainty elevated and delay policy rate cuts into 2027.

Our base case assumes a short and ultimately contained military campaign, though the duration has already extended beyond initial expectations and is beginning to filter through to macro data, most notably inflation via energy prices. While the full extent of infrastructure damage remains uncertain, damage to date does not appear irreversible, allowing markets to continue treating the disruptions as largely temporary. That being said, there remains the threat into summer of inventory draws continuing which could, without a resolution and opening of Hormuz, see higher energy price reactions. Under this scenario, energy-price and risk-premium spikes should fade over time, leaving the broader disinflation and gradual easing narrative broadly intact. Risks increase if the conflict proves more protracted, escalates regionally, or disrupts key commercial energy infrastructure or shipping lanes, which would sustain higher energy prices, slow disinflation, and tighten financial conditions, particularly for energy-importing economies. In rank-order terms, North America remains well sheltered, Europe is more exposed, and EMs face faster and more intense impacts. Absent lasting damage to critical energy assets, markets are likely to re-anchor to fundamentals as tensions ease, though even a resolution would remove tail risks rather than eliminate macro uncertainty outright.

In DMs, we expect an orderly slowdown but continued resilience amid heightened geopolitical and energy-price uncertainty. The US enters H2 2026 in a relatively strong position and remains better sheltered than other regions, supported by a resilient economy and robust corporate earnings, though momentum is likely to moderate as higher energy prices and tighter financial conditions weigh at the margin. The lagged effects of prior easing and fiscal measures should continue to support activity and investment, potentially broadening beyond AI infrastructure over time. Against this backdrop, the US Fed is likely to remain cautious, awaiting clearer evidence that inflation is moving sustainably toward target and assessing the second-round effects of higher energy prices. While labor markets and earnings growth remain resilient, the case for policy easing has weakened, leading markets to push expectations for rate cuts further into 2027. The euro area's cyclical rebound is more fragile, with upside from fiscal support and pro-growth initiatives offset by energy sensitivity, political and fiscal headwinds, and weaker external demand. The European Central Bank (ECB) raised rates by 25 basis points (bps) in June in response to rising inflationary pressures stemming from higher energy prices, while acknowledging downside risks to growth. Going forward, the ECB is expected to remain data-dependent, balancing persistent inflation pressures against a soft and uneven growth backdrop. The UK remains in a stagflationary mix of below-trend growth and sticky services inflation, leaving the Bank of England (BoE) on an "active hold," with further hikes only likely under a more persistent and severe energy shock; policy remains highly data- and energy-price-dependent, with two-sided risks to the outlook. Japan has begun policy normalization, with growth supported by Prime Minister Takaishi's fiscal agenda and improving wage dynamics. Inflation is expected to remain around the 2% target, reinforcing the case for further—but gradual—Bank of Japan (BoJ) normalization over the next two years.

Factsheet
Manulife PRS-Growth Fund

In EM, divergences are widening. Domestic-demand-led and energy-exporting economies are better positioned, while energy-importing and export-heavy peers face earlier and more intense pressure. The conflict in the Middle East has tilted EM Asian central banks more hawkish, as supply shocks and concerns around currency depreciation constrain policy flexibility in a region highly exposed to global trade, while Latin America (Latam) benefits from stronger commodity demand. Chinese Mainland's growth remains imbalanced, with external resilience contrasting with soft domestic demand and ongoing property sector adjustment; supportive People's Bank of China (PBoC) policy should help stabilize growth, though overcapacity and lingering deflationary impulses remain key watchpoints.

Looking ahead, we remain modestly overweight equities, supported by resilient earnings, steady global growth, and sustained investment in productivity themes such as AI. Market leadership has become more selective, with strength concentrated in AI enablers including semiconductors, power infrastructure, and hardware, while monetization lags in parts of software. Elevated valuations and geopolitical risks warrant discipline, favoring quality growth with earnings momentum alongside selective cyclicals and value, and continued diversification across regions as non-US opportunities gradually broaden. We remain underweight fixed income, favoring shorter duration exposures as upside inflation risks, fiscal pressures, and energy shocks leave long-end yields vulnerable. Tight credit spreads—particularly in IG—offer limited compensation for repricing risk despite solid balance sheets. With equity bond correlations less reliable in a geopolitically charged environment, diversification remains critical, including selective non-US equity exposure and alternative diversifiers such as precious metals and real assets.

Fund review and strategy

Overall equities in the portfolio stood at approximately 85% and fixed income at 12%, with the remainder in money market and cash at month-end. DM equities, which remained the portfolio's largest allocation, were the primary contributor to returns during the month. Asia Pacific ex-Japan equities also added value and were the second-largest contributor to performance. Partially offsetting these gains, Malaysian equities were the main detractor, while FX and cash management activities detracted modestly.
