

# Manulife Investment Asia-Pacific Ex Japan Fund

## Fund category

Equity

## Fund objective

To provide long-term capital appreciation through investment mainly in equities and equity-related securities of companies in the Asia-Pacific ex Japan region.

## Investor profile

The Fund is designed for investors who are willing to accept a higher level of risk, seeking to diversify their investments across the APxJ region and have a long-term investment horizon.

## Fund manager

Manulife Investment Management (M) Berhad  
200801033087 (834424-U)

## Trustee

HSBC (Malaysia) Trustee Berhad  
193701000084 (1281-T)

## Fund information (as at 30 Jun 2026)

|                        |                                                                |
|------------------------|----------------------------------------------------------------|
| NAV/unit               | RM 0.6839                                                      |
| Fund size              | RM 480.79 mil                                                  |

| 2   | Taiwan                  | 25.6  |
| 3   | China                   | 21.1  |
| 4   | Others                  | 19.1  |
| 5   | Cash & Cash Equivalents | 7.6   |

## Manulife Investment Asia-Pacific Ex Japan Fund

### Market review

Asia Pacific ex Japan equities ended the month higher. Market environment was impacted by a combination of falling commodity prices following moves toward a peace deal between US and Iran, a stronger US dollar, rising bond yields after a hawkish interpretation of new US Fed Chair Kevin Warsh's first FOMC meeting, and volatility in AI-related hardware stocks. North Asia markets remained relatively resilient, supported by continued earnings upgrades in technology sectors, while the Chinese market relatively lagged regional performance.

China equities retreated during the month as softer domestic economic activity and weak performance from offshore internet stocks weighed on sentiment. While fixed asset investment declined and retail sales softened, export growth remained resilient supported by high-tech exports.

Taiwan equities posted gains, supported by continued optimism surrounding AI infrastructure and semiconductors. Earnings forecasts were revised higher, led by technology companies. Export growth accelerated sharply in May, driven by both technology and non-technology products, while industrial production remained strong.

Korea equities were broadly flat in a volatile month. Technology was the only sector to generate positive returns as AI-related demand continued to support earnings upgrades. Export data remained exceptionally strong, with June exports reaching a record high and extending the current growth streak.

India equities advanced modestly, benefiting from lower oil prices and resilience in domestic economic activity. Real estate and financials outperformed, while technology and materials lagged. Industrial production exceeded expectations, supported by strength in mining and electricity generation. The Reserve Bank of India kept policy rates unchanged despite market expectations for a possible hike, while announcing measures aimed at attracting foreign capital inflows and supporting the rupee.

ASEAN markets were mixed amid continued pressure from a stronger US dollar and weaker regional currencies. Philippine equities advanced despite the central bank raising policy rates by 25 bps to 4.75%. Singapore equities gained on robust export growth, supported by strong AI-related demand for semiconductors and data-centre supply chains. Thai equities posted slight gains on resilient exports, while the Bank of Thailand kept rates unchanged and maintained a dovish tone to support the economic recovery. Malaysia equities edged lower despite generally resilient corporate earnings and further progress on the Malaysia Value-Up programme. Indonesia equities remained under pressure as the ongoing MSCI market accessibility assessment weighed on valuations and foreign investor interest, while Bank Indonesia raised interest rates by 50 bps to support the rupiah.

Australia equities declined during the month, led lower by the energy and materials sectors as commodity prices weakened. On the economic front, inflation eased more than expected in May, while the unemployment rate improved marginally.

### Market outlook

Asian and global equity markets delivered strong performance in 2025. Much of this performance has been concentrated in a few sectors – namely the tech space. While we continue to hold a positive view on the outlook for the AI-driven tech sector, we have been increasingly selective in our stock selection given some of the moves we have seen YTD. We continue to see upside potential in areas such as DRAM through the attractive pricing outlook and through the increased adoption of HBM (High Bandwidth Memory), which should lead to strong earnings growth outlook for the sector. The other area that the portfolio exploiting within the tech sector is through the exposure to Chinese Mainland, given its intention to become even more self-reliant amid geopolitical tensions.

The recent conflict in the middle east has resulted in a sell-off in many markets. While we are monitoring the situation, we view this correction as an opportunity as we do not see much direct impact on fundamentals. However, in response to this uncertainty, we have added to our energy exposure within the portfolio to act as a hedge against any further escalation in conflict within the middle east. The energy companies we hold are highly cash generative even at lower oil prices and offer high dividend yields.

We are also exploring other areas that are beneficiaries of rapid adoption of AI. Specifically, the increased power usage of AI data centres will require investment in not only base load power solutions, but also the development of high voltage infrastructure and the necessary industrial equipment, e.g. high voltage transmission equipment. Battery supply chains will also continue to play an important role globally through the energy transition and we continue to hold positions in these names.

### Fund review and strategy

The Fund outperformed the benchmark on the back of stock selection and asset allocation decisions at the geographic and sector levels. Stock selection in China and India were the primary contributors. Stock selection in Australia and Korea were the primary detractors.

Contributing to performance was a Chinese electronic material manufacturer. The company continues to benefit from favourable supply-demand dynamic in its key product (used in printed circuit boards' production), which should drive higher average selling price and gross margin. Demand is backed by AI-driven upcycle and recovering traditional electronics demand, while supply is limited with industry constraints. The company's vertical integration in copper foil and glass fiber helps mitigate upstream cost pressures, supporting further potential margin improvement into 2026.

Detracting from performance was a Korean renewable energy equipment manufacturer. Market remained cautious following the Korean government's announcement of a 28% reduction in 2026 grey hydrogen auction volumes, reducing the source of domestic demand for fuel-cell projects. Despite the near-term domestic regulatory setback, the company's growth remains supported by improving visibility in US data centre-related fuel cell demand. Structural power shortages and accelerating AI-driven electricity demand in the US strengthened the investment case for on-site fuel cell solutions, where the company's systems are seen as cost-competitive.

Overall, we remain constructive on the long-term structural growth opportunities tied to the ongoing expansion of AI infrastructure. In Taiwan, we favour companies benefiting from growth in advanced semiconductor packaging and testing, ASIC adoption, AI hardware development, and healthcare businesses with strong cash-flow generation. In Korea, we see compelling opportunities within the memory semiconductor ecosystem, particularly among equipment manufacturers and key suppliers that are benefiting from the growing demand for high-bandwidth memory and AI-related infrastructure investments. We also maintain exposure to industrial and power infrastructure companies that stand to benefit from accelerating data centre construction, electrification trends, and increasing investment in energy networks.

Based on the Fund's portfolio returns as at 31 May 2026 the Volatility Factor (VF) for the Fund is as indicated in the table above and are classified as in the table (source: Lipper). "Very High" includes Funds with VF that are above 16.460, "High" includes Funds with VF that are above 11.955 but not more than 16.460, "Moderate" includes Funds with VF that are above 8.735 but not more than 11.955, "Low" includes Funds with VF that are above 4.705 but not more than 8.735 and "Very Low" includes Funds with VF that are above 0.000 but not more than 4.705 (source:FIMM). The VF means there is a possibility for the Funds in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified Funds. VF and VC are subject to monthly revision or at any interval which may be prescribed by FIMM from time to time. The Fund's portfolio may have changed since this date and there is no guarantee that the Funds will continue to have the same VF or VC in the future. Presently, only Funds launched in the market for at least 36 months will display the VF and its VC.
